AMENDMENTS TO THE CLAIMS

1. (Previously Presented) A method of determining a target language for automatic programmatic translation of text in a first language, comprising the steps of:

creating text in the first language, the text being in a single discreet document;

using an HTML 'lang' attribute to set at least one target language for a portion of the text which is different from the first language; and,

automatically programmatically translating the portion having the first language into said at least one target language with said 'lang' attribute as a key for machine translation in order to produce a mixed translation of the text.

2. (Original) The method of Claim 1, further comprising the step of:

using Language Guessing to determine the first language.

3. (Original) The method of Claim 1, wherein said at least one target language comprises a plurality of languages resulting in translation into a mixed language content.

Claims 4-12 (Cancelled)
